Endpoint		Methods	Description
Public	ski-types	GET	This resource is the collection of all Ski-types Media type: application/json
Customer	orders	GET	This resource is the collection of all orders Media type: application/json
	order	GET, POST, PUT, DELETE	This resource contains information about an individual order Also updating, adding and deleting an order Media type: application/json
	production-plan	GET	This resource contains information about a production-plan Media type: application/json
Planner	production-plan	PUT	This endpoint allows adding a new production-plan Media type: application/json
Storekeeper	order	GET, POST	This resource contains information about an individual order Media type: application/json
	orders	GET	This resource is the collection of all orders Media type: application/json
	ski	PUT	This endpoint allows adding a new ski Media type: application/json

Customer rep	orders	GET	This resource is the collection of all orders Media type: application/json
	order	GET, POST	This resource contains information about an individual order. Also updating an order. Media type: application/json
Shipper	shipment	GET, PUT	This resource contains information about an individual shipment. Also adding a new shipment. Media type: application/json
	order	GET, POST	This resource contains information about an individual order. Also updating an order. Media type: application/json

Endpoint		URL	Description
Public	ski-types	http://localhost/public/ski-types?model={model} http://localhost/public/ski-types?grip={grip}	Use this to get information about all ski types based on the model or grip.
Customer	orders	http://localhost/customer/orders	Use this to get information about all orders
	order	http://localhost/customer/orders/{id}	Use this to get information about a specific order
	production-plan	http://localhost/customer/production-plan/{id}	Use this to get information about a specific shipment

Planner	production-plan	http://localhost/planner/production-plan/{id}	Use this to get information about a specific production plan
Storekeeper	order	http://localhost/storekeeper/orders/{id}	
	orders	http://localhost/storekeepr/orders	
	ski	http://localhost/storekeeper/ski/{id}	
Customer rep	order	http://localhost/customer_rep/orders/{id}	
	orders	http://localhost/customer_rep/orders	
Shipper	shipment	http://localhost/shipper/shipment	
	order	http://localhost/shipper/orders/{id}
